

# CLENEO SINGLE SMART

The Lightweight Absorber for Wall and Ceiling

# THE ANTI-NOISE BACKDROP

Aesthetic, flexible, smart – for walls and ceilings

## The intelligent absorber.

Manufactured from PET felt, a highly acoustically effective material, Cleaneo Single Smart improves the room sound thanks to its highly sound absorbing surface structure, and is thus ideal for diverse residential and working environments. The smart solution is just as easy to maintain as it is durable, caters for a pleasant room climate and can be produced in a diverse range of colours.

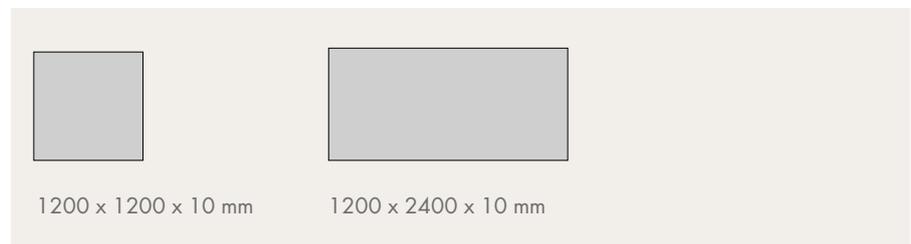

## Light in weight and application.

Slim and light but still very stable: Cleaneo Single Smart does not need a frame construction and can be customized with a cutter knife, without any dust. And even the assembly is comfortable: With practical fastener sets for the wall (magnetic or CD profile) and cord suspensions for the ceiling.

## Colour choice

## Standard formats

## Installation for wall and ceiling

# SMART BENEFITS

**Easy and clean installation.** Thanks to the ease of installation, the modules can be quickly installed in a fully finished room. Perfect for retrofitting improved acoustics.

**Full freedom of expression.** Cleaneo Single Smart does not need a frame construction and can be very easily customized to the required shape with a cutter knife.

CLENEO SINGLE SMART

## Good to know

Please contact your Knauf advisor to get prefabricated customized shapes, special colours or printed Cleaneo Single Smart modules.

**Sophisticated fastening systems**

**Efficient design formats and installation options for every application.**

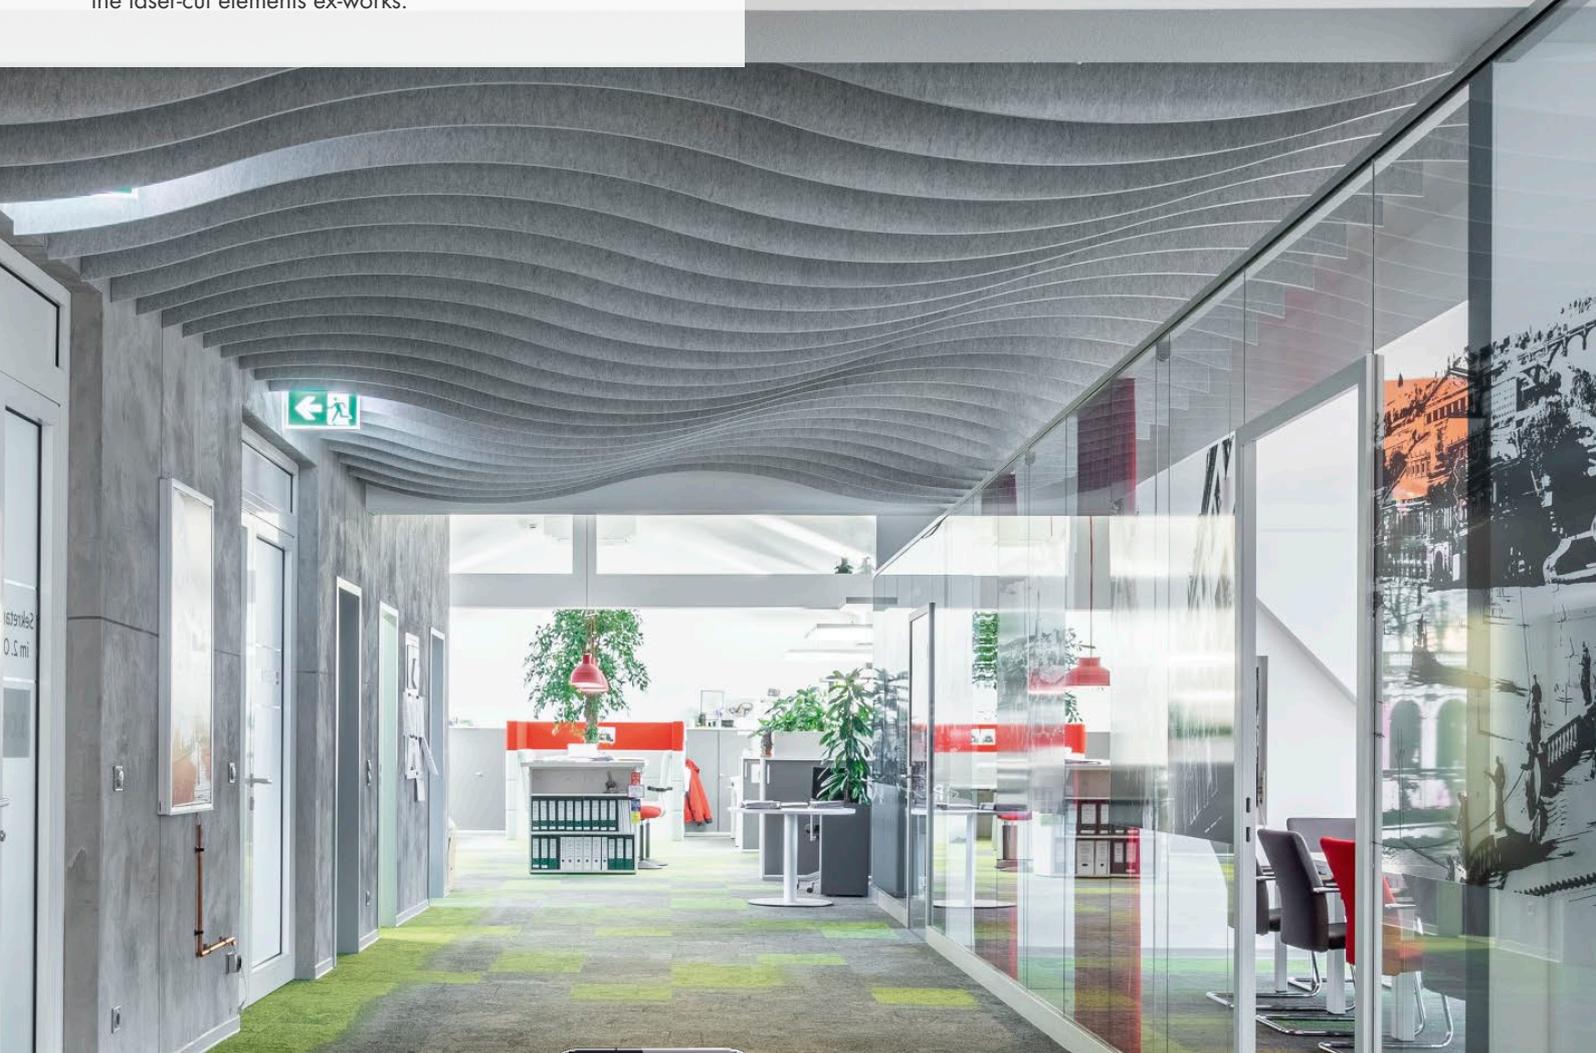

Single Smart absorbers enable effective acoustical upgrading of rooms creating a pleasant room climate. The slim format with a thickness of just 10 mm offers the maximum effect with minimum space requirement.

**Diverse areas of application.** Single Smart is resistant to moisture and can therefore be used in rooms subject to moisture to improve the acoustics.

## As a baffle canopy

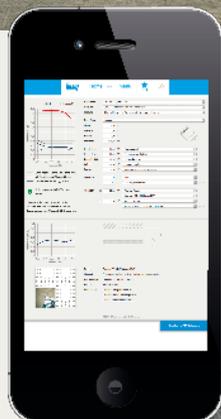

For an exclusive design simply cut the Single Smart units to the required geometry with a cutter.

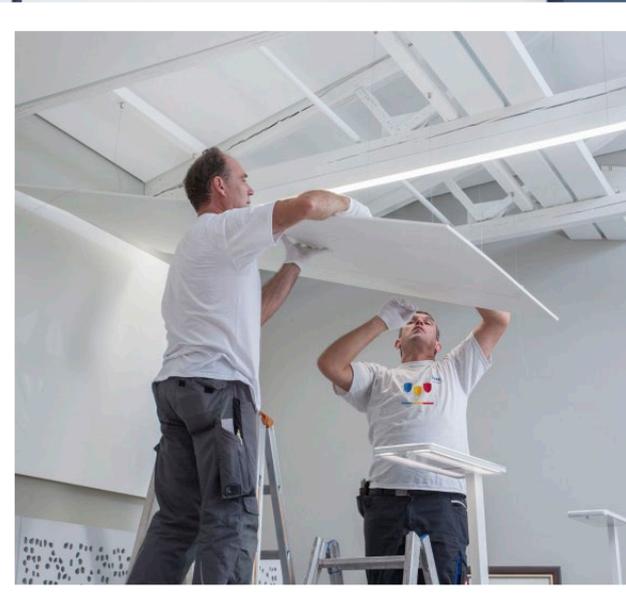

You can also use a CAD program to achieve the vivid three-dimensional design effect you require and receive the laser-cut elements ex-works.

### Good to know

The acoustic effect of Cleaneo Single Smart can be calculated with the Knauf Raumakustikrechner (room acoustics calculator). [www.knauf.de/raumakustikrechner](http://www.knauf.de/raumakustikrechner)

Community hall, Jork

## As a ceiling canopy

Single Smart can be integrated organically into existing ceiling designs and lighting concepts for discrete, acoustic upgrading.

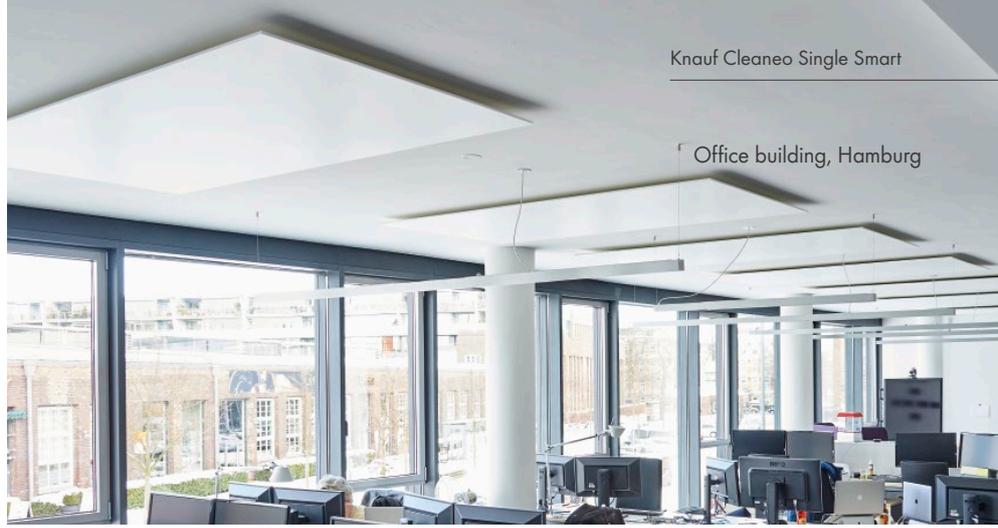

## On walls and ceilings

Cleaneo Single Smart develops its effect right where it is needed. Single Smart absorbs noise above conference tables, at communication focal points or directly on the wall at individual workstations.

Mosbach

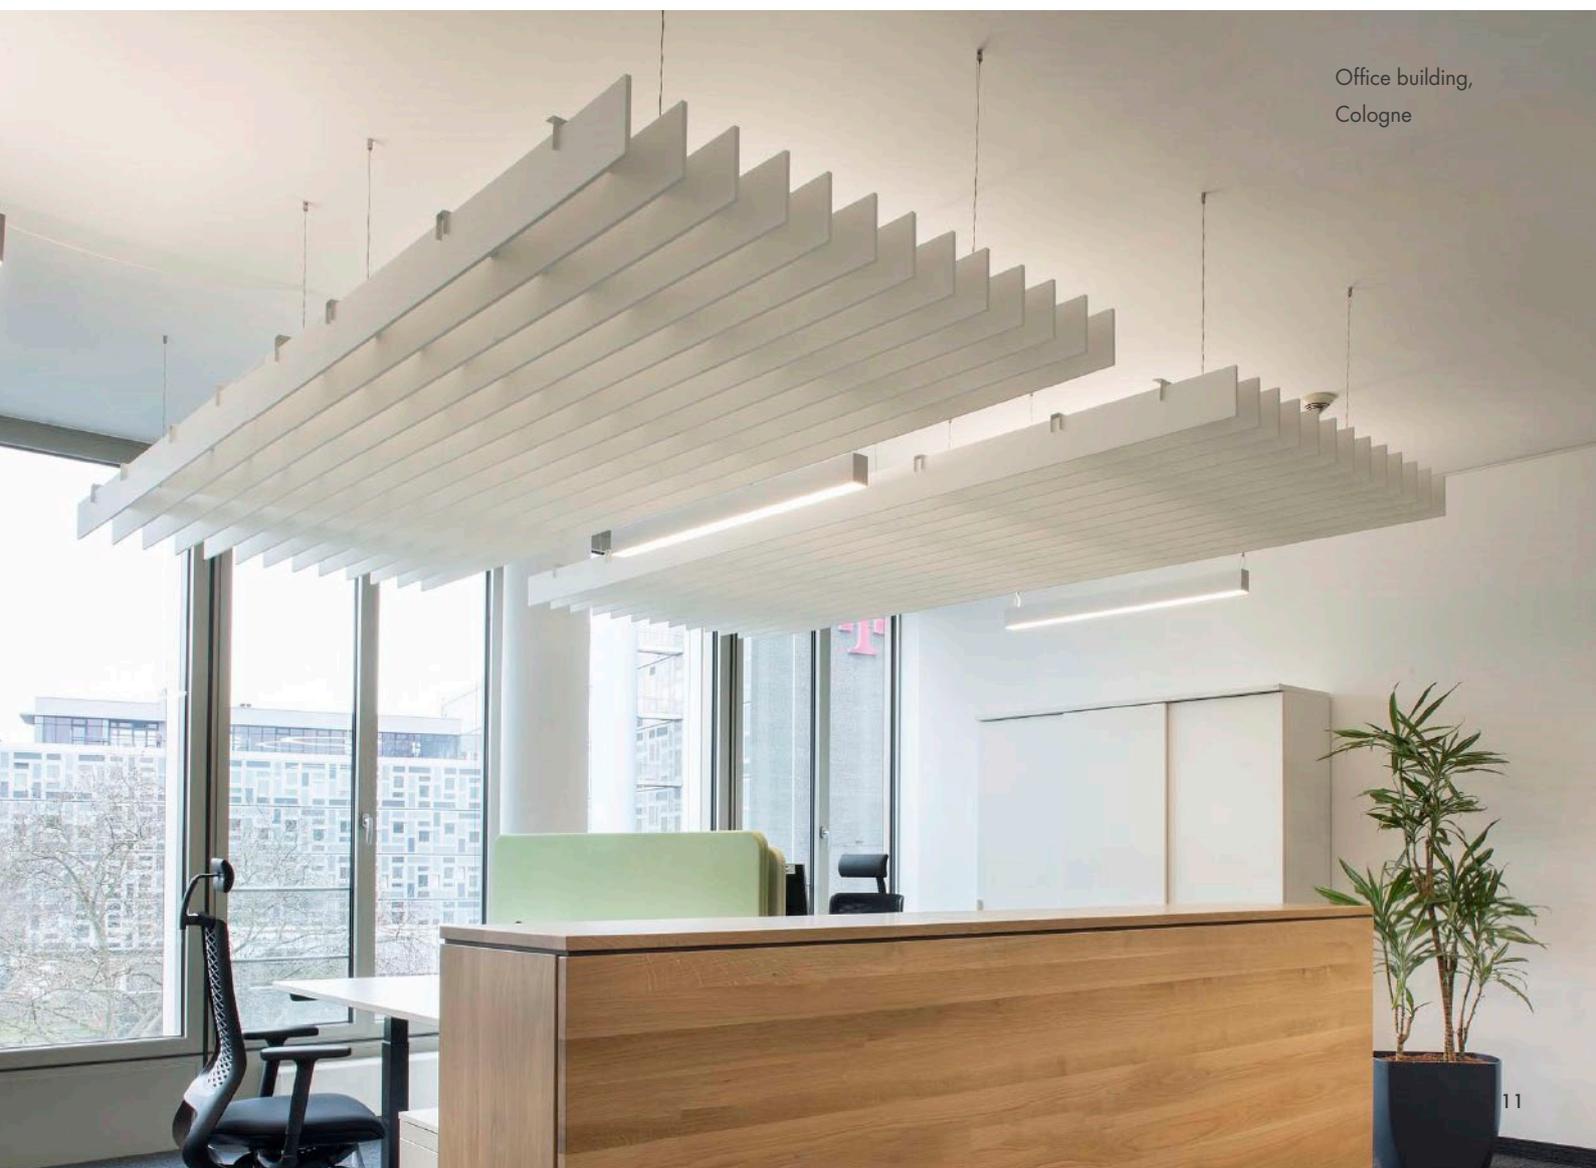

## As a design element

Single Smart has the ability to organize spaces. Arrange the ceiling sections, loosen up the look with design options to create a floating suspended lightness in design using baffle arrangements over sources of noise.
